**7 000 €**

excluding VAT

- FCA Kaplice, Czech Republic

- In a unique, patented process the chain sharpener can sharpen the tooth as well as the rakers (depth gauge) in one cycle
- Automatic, highly precise sharpening process, no surveillance needed
- The threefold scannerhead senses right and left teeth precisely and aligns the grinding head accordingly
- Also missing teeth are detected and the machine will shut down automatically, to avoid damage to the chain
- The grinding head for the rakers (depth gauge) can be used separately
- Fine tuning of both grinding cycles can be done during operation!
